# ВСПОМОГАТЕЛЬНЫЕ ТАБЛИЦЫ

ДЛЯ ИСЧИСЛЕНИЯ ОБЪЕМОВ КРУГЛЫХ  
ЛЕСОМАТЕРИАЛОВ ПРИ ДЛИНЕ В МЕТРАХ  
И ТОЛЩИНЕ В САНТИМЕТРАХ

По метрическому стандарту

---

ИЗДАНИЕ  
ГРЯЗОВЕЦКОГО ЛЕСПРОМХОЗА ГОСТРЕСТА «СЕВЕРОЛЕС»  
ВОЛОГДА—1931

## ПРЕДИСЛОВИЕ

Каждому работнику лесной промышленности известно значение возможности наиболее быстрого подсчета кубатуры лесоматериалов.

Кроме счетных работников, с указанными вычислениями приходится сталкиваться также и всей массе низовых работников леса: десятникам, приемщикам, вербовщикам и пр., и если первые в большинстве своем к означенной работе достаточно подготовлены и имеют возможность пользоваться счетами, а иногда и арифмометрами, то вторые находятся в несравненно менее благоприятных условиях.

Составленные нами таблицы дают возможность найти объем любого количества круглых лесоматериалов в пределах первой сотни, не прибегая к каким-либо дополнительным вычислениям, и основная целеустановка их—оказать практическую помощь низовым техническим и счетным лесным работникам в их повседневной работе.

Таблицы составлены только на основные размеры круглых лесоматериалов, заготавливаемых по Северному краю, обмеряемых по длине в метрах и толщине в сантиметрах.

На каждый размер по длине и толщине имеется отдельная таблица.

В верхней горизонтальной графе таблицы обозначено количество бревен в единицах от 0 до 9, а в крайней левой вертикальной колонке — количество бревен в десятках. Объем данного количества бревен надо искать в месте пересечения горизонтальной строки, озаглавленной требуемым количеством десятков, с колонкой, озаглавленной требуемым количеством единиц.

Например, чтобы найти объем 68 бревен длиной 7 метров, толщиной 28 сантиметров, находим таблицу данного размера и в месте пересечения строки, озаглавленной цифрой 60, с колонкой, озаглавленной цифрой 8, находим объем данного количества—36,516 куб. м.

Ф. РЕПНИКОВ.
